

I want to say thanks for all your assistance with Grace. As you understand she is a nervous, noise phobic border collie. I have to say that the essences that you have given have helped very much indeed. After the first lot I noticed a big difference in her, such as kids playing cricket where we were training. Normally this would drive her to sit under the pedals in the car. But now she can sit out and watch the other dogs working. On another occasion there were some boys playing soccer and shouting, again, usually she would be back in the car under the pedals. I took my eyes off her and when I looked for her she was over playing with the boys- the noise and activity had not deterred her in any way. For her this was a huge step forward, how good is that? She started a second lot of essence, but has not needed them. So many thanks again.
