

Lilli is an 8 year old Blue Cattle Cross. We got her as a pup from a local pound when she was about 8 weeks old. We socialized her very early and she was a happy, highly energetic, healthy pup. We also got her used to outdoor camping from a very early age on, she was a social butterfly to people and dogs.

When she turned 3 years old, we noticed an increase in fear development towards rumbling noises and thunderstorms. She also started having epileptic seizures every second month. Over the years, her fears to all sorts of noises increased, she would not even leave the house on cloudy days. We have tried a lot of things to ease her fears, some helped a bit, some didn't. We kind of went along with this situation as we did not know what to do.

Last year we decided to go on a camping trip to Tasmania. Our biggest concern was the boat trip, where pets and people are separated for 12 hours minimum. This is when I contacted Helen. I deeply regret that I hadn't contacted her earlier on when these problems started. Helen has changed our life's forever. Not only has Helen addressed Lillis fear issue, she has also looked into her problems with the epileptic seizures.

Helen has worked with us together so wonderfully. Now Lilli happily goes for walks on cloudy days and hasn't had an epileptic seizure for 5 months. Lilli is the very happy dog she used to be and even our Vet noticed how healthy and happy she is. We can highly, highly recommend Helen.
