

My 10yr old Golden Retriever, Topaz after two broken toe injuries suffers from arthritis in her feet complicated by a bone spur on one toe. She started to limp now and again and this would get worse under different situations.

For pain management and to assist with her overall mobility, I opted for alternative therapy rather than continual use of anti-inflammatory medication. Helen assessed and treated Topaz with Bowen.

Before long there was a notable improvement, once again Topaz was eager to go for her daily walks. Today we continue with a maintenance program of Bowen Therapy and this continues to sustain improvements that have been gained with her mobility.
